Installation de la cle SSH sur github

- ▶ La premiere des choses consiste a genere la cle ssh par le logiciel puttyGen, ou direcement en la telechargeant via l'invite de commandes
- ▶ Ensuite l'integrer toujours en ligne sur github

En utilisant puttygen

Telecharger depuis l'invite de commande

Generating a new SSH key

1 Open Git Bash.

2 Paste the text below, substituting in your GitHub email address.

```
$ ssh-keygen -t rsa -b 4096 -C "your_email@example.com"
```

This creates a new ssh key, using the provided email as a label.

```
Generating public/private rsa key pair.
```

3 When you're prompted to "Enter a file in which to save the key," press Enter. This accepts the default file location.

```
Enter a file in which to save the key (/c/Users/you/.ssh/id_rsa): [Press enter]
```

4 At the prompt, type a secure passphrase. For more information, see ["Working with SSH key passphrases"](#).

```
Enter passphrase (empty for no passphrase): [Type a passphrase]
Enter same passphrase again: [Type passphrase again]
```

Adding your SSH key to the ssh-agent

Before adding a new SSH key to the ssh-agent to manage your keys, you should have [checked for existing SSH keys](#) and [generated a new SSH key](#).

If you have [GitHub Desktop](#) installed, you can use it to clone repositories and not deal with SSH keys. It also comes with the Git Bash tool, which is the preferred way of running `git` commands on Windows.

1 Ensure the ssh-agent is running:

- › If you are using the Git Shell that's installed with GitHub Desktop, the ssh-agent should be running.
- › If you are using another terminal prompt, such as Git for Windows, you can use the "Auto-launching the ssh-agent" instructions in ["Working with SSH key passphrases"](#), or start it manually:

```
# start the ssh-agent in the background
$ eval $(ssh-agent -s)
Agent pid 59566
```

2 Add your SSH private key to the ssh-agent. If you created your key with a different name, or if you are adding an existing key that has a different name, replace `id_rsa` in the command with the name of your private key file.

```
$ ssh-add ~/.ssh/id_rsa
```

3 Add the SSH key to your GitHub account.

Integration dans github

The screenshot shows the GitHub interface for the repository 'FouomaOscar / premier_test_mozilla'. The top navigation bar includes links for 'Pull requests', 'Issues', and 'Gist'. The repository header shows 'Watch', 'Star', and 'Fork' buttons, all with a count of 0. Below the header, a tabbed interface includes 'Code', 'Issues', 'Pull requests', 'Projects', 'Wiki', 'Pulse', 'Graphs', and 'Settings' (which is currently selected). On the left sidebar, a menu lists 'Options', 'Collaborators', 'Webhooks', 'Integrations & services', and 'Deploy keys' (which is highlighted). The main content area is titled 'Deploy keys' and features an 'Add deploy key' button. A single deploy key is listed with the title 'MaCle', an SSH icon, a fingerprint '1e:11:13:4f:14:78:59:45:f4:8f:37:ed:36:b8:3b:ce', and a note 'Added on 1 Apr 2017 by @FouomaOscar'. Below this, there is a 'Delete' button. The form for adding a new key includes a 'Title' text input field and a 'Key' text area with a placeholder message: 'Begins with 'ssh-rsa', 'ssh-dss', 'ssh-ed25519', 'ecdsa-sha2-nistp256', 'ecdsa-sha2-nistp384', or 'ecdsa-sha2-nistp521''.
